Powder Technology 98 (1998) 285–288

POWDER TECHNOLOGY

Subject Index of Volume 98

Agglomeration
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79
Air permeation
simulation of air permeation through a moving plug in a vertical pipe, 209
Air velocity
simulation of air permeation through a moving plug in a vertical pipe, 209
Alcohol
physical and chemical changes of sulphides during intensive grinding in organic liquids, 74
Amorphization
physical and chemical changes of sulphides during intensive grinding in organic liquids, 74
Anisotropy
a review of induced anisotropy and steady-state flow in powders, 191
Attraction forces
particle aggregation and the van der Waals forces in gas–solids fluidization, 201
Avalanching
the avalanching characterisation of the handleability of blended coal fuels, 157
Axial component
the application of computer-based imaging to the measurements of particle velocity and voidage profiles in a fluidized bed, 183

Baffles
the influence of horizontal internal baffles on the flow pattern in dense fluidized beds by X-ray investigation, 273
Bends in pipes
the effect of a bend on the particle cross-section concentration and segregation in pneumatic conveying systems, 95
Binary system
segregation by size difference in gas fluidized beds, 139
Binders
dry-pressing behavior of silicone-coated alumina powders, 104
Bubble flow rate
segregation by size difference in gas fluidized beds, 139
Bubbles
computer simulation of bubbles in large-particle fluidized beds, 38
dynamic forces on a horizontal tube due to passing bubbles in fluidized beds, 177
Bubbling beds
the influence of particle thermal time constants on convection coefficients in bubbling fluidized beds, 13

Caking
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79
Calcium aluminate
effect of heat-assisted grinding of a calcium hydroxide–gibbsite mixture on formation of hydrated calcium aluminate and its hydration behavior, 279
Calorimetry
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79
Circulating fluidized beds
inlet and outlet effects on flow patterns in gas–solid risers, 151
L-valve behaviour with solids of different size and density, 231
Classification
classification of fluidized particles by Archimedes number, 48
inlet and outlet effects on flow patterns in gas–solid risers, 151
a model for performance of the centrifugal countercurrent air classifier, 171
Classified particle cut size
a model for performance of the centrifugal countercurrent air classifier, 171
Coal
the avalanching characterisation of the handleability of blended coal fuels, 157
Composite analysis
the analysis of zirconia–silica composites using differential thermal analysis, Fourier transform-Raman spectroscopy and X-ray scattering/scanning electron microscopy, 109
Computational fluid dynamics
study of the gas velocity field generated by a multi-tuyere fluidization gas distributor in the absence of particles, 54
Computer-based imaging
the application of computer-based imaging to the measurements of particle velocity and voidage profiles in a fluidized bed, 183
Convection coefficients
the influence of particle thermal time constants on convection coefficients in bubbling fluidized beds, 13
Critical Archimedes number
classification of fluidized particles by Archimedes number, 48

Dense fluidized bed
the influence of horizontal internal baffles on the flow pattern in dense fluidized beds by X-ray investigation, 273
Discrete element simulation
an efficient calculation method for particle motion in discrete element simulations, 223
Distinct element model
computer simulation of bubbles in large-particle fluidized beds, 38
Drum mixer
mixing of granular material in a drum mixer undergoing rotational and rocking motions. II. Segregating particles, 125
Dust cake loading
effects of particle polydispersity and shape factor during dust cake loading on air filters, 241

Elsevier Science S.A.

Encapsulated material
microencapsulated phase-change materials as heat transfer media in gas-fluidized beds, 217

Flow
the avalanching characterisation of the handleability of blended coal fuels, 157
Flow pattern
the influence of horizontal internal baffles on the flow pattern in dense fluidized beds by X-ray investigation, 273
Flow perturbations
mixing of granular material in a drum mixer undergoing rotational and rocking motions. I. Uniform particles, 113
Flow structure
inlet and outlet effects on flow patterns in gas–solid risers, 151
Fluidization
classification of fluidized particles by Archimedes number, 48
study of the gas velocity field generated by a multi-tuyere fluidization gas distributor in the absence of particles, 54
particle aggregation and the van der Waals forces in gas–solids fluidization, 201
Fluidization velocity
the influence of horizontal internal baffles on the flow pattern in dense fluidized beds by X-ray investigation, 273
Fluidized beds
the influence of particle thermal time constants on convection coefficients in bubbling fluidized beds, 13
computer simulation of bubbles in large-particle fluidized beds, 38
dynamic forces on a horizontal tube due to passing bubbles in fluidized beds, 177
the application of computer-based imaging to the measurements of particle velocity and voidage profiles in a fluidized bed, 183
a model for the prediction of the expansion of a fluidized bed of polysized resin, 258
Forces
dynamic forces on a horizontal tube due to passing bubbles in fluidized beds, 177
Froth flotation
interpretation of the effect of froth structure on the performance of froth flotation using image analysis, 61
Froth structure
interpretation of the effect of froth structure on the performance of froth flotation using image analysis, 61

Gas distributor design
study of the gas velocity field generated by a multi-tuyere fluidization gas distributor in the absence of particles, 54
Gas-fluidized beds
microencapsulated phase-change materials as heat transfer media in gas-fluidized beds, 217
Geldart's diagram
classification of fluidized particles by Archimedes number, 48
Granular material
mixing of granular material in a drum mixer undergoing rotational and rocking motions. II. Segregating particles, 125
Grinding
physical and chemical changes of sulphides during intensive grinding in organic liquids, 74
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166
Grinding equation
new parameterization for a discrete batch grinding equation, 265

Handleability
the avalanching characterisation of the handleability of blended coal fuels, 157
Heat-assisted grinding
effect of heat-assisted grinding of a calcium hydroxide–gibbsite mixture on formation of hydrated calcium aluminate and its hydration behavior, 279
Heat transfer media
microencapsulated phase-change materials as heat transfer media in gas-fluidized beds, 217

Image analysis
interpretation of the effect of froth structure on the performance of froth flotation using image analysis, 61
Impact energy
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166
Inlet and outlet structure
inlet and outlet effects on flow patterns in gas–solid risers, 151
Internal tubes
dynamic forces on a horizontal tube due to passing bubbles in fluidized beds, 177
Inverse problems
stereological correction of linear grade distributions for mineral liberation, 21

Kinetics
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79

Light scattering
the use of projected area distribution functions in particle shape measurement, 250
Lubricants
dry-pressing behavior of silicone-coated alumina powders, 104
L-valves
L-valve behaviour with solids of different size and density, 231

Materials
new parameterization for a discrete batch grinding equation, 265
Mechanochemical synthesis
effect of heat-assisted grinding of a calcium hydroxide–gibbsite mixture on formation of hydrated calcium aluminate and its hydration behavior, 279
Microcrystalline cellulose powder
a staining technique for evaluating the pore structure variations of microcrystalline cellulose powders, 135
Mineral liberation
stereological correction of linear grade distributions for mineral liberation, 21
Mineral processing
an efficient calculation method for particle motion in discrete element simulations, 223
Mixing
mixing of granular material in a drum mixer undergoing rotational and rocking motions. I. Uniform particles, 113
segregation by size difference in gas fluidized beds, 139
Mixing index
segregation by size difference in gas fluidized beds, 139
Model
interpretation of the effect of froth structure on the performance of froth flotation using image analysis, 61
Molerus' classification
classification of fluidized particles by Archimedes number, 48
Motion of balls
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166

Non-mechanical valves
L-valve behaviour with solids of different size and density, 231
Numerical criteria
classification of fluidized particles by Archimedes number, 48

On-line coarse particle size measurement
particle overlap and segregation problems in on-line coarse particle size measurement, 1

Parameterization
new parameterization for a discrete batch grinding equation, 265
Particle Element Method
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166
Particle overlap
particle overlap and segregation problems in on-line coarse particle size measurement, 1
Particle polydispersity
effects of particle polydispersity and shape factor during dust cake loading on air filters, 241
Particle segregation
the effect of a bend on the particle cross-section concentration and segregation in pneumatic conveying systems, 95
Particle shape
the use of projected area distribution functions in particle shape measurement, 250
Particle size
segregation by size difference in gas fluidized beds, 139
Particle velocity
the application of computer-based imaging to the measurements of particle velocity and voidage profiles in a fluidized bed, 183
Planetary Ball Mill
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166
Plug velocity
simulation of air permeation through a moving plug in a vertical pipe, 209
Pneumatic conveying systems
the effect of a bend on the particle cross-section concentration and segregation in pneumatic conveying systems, 95
Poly-sized resin
a model for the prediction of the expansion of a fluidized bed of poly-sized resin, 258
Pore structure
a staining technique for evaluating the pore structure variations of microcrystalline cellulose powders, 135
Potash
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79
Powder blending
mixing of granular material in a drum mixer undergoing rotational and rocking motions. I. Uniform particles, 113
Powders
a review of induced anisotropy and steady-state flow in powders, 191
Pressing
dry-pressing behavior of silicone-coated alumina powders, 104
Pressure drop
simulation of air permeation through a moving plug in a vertical pipe, 209
Projected area
the use of projected area distribution functions in particle shape measurement, 250

Radial component
the application of computer-based imaging to the measurements of particle velocity and voidage profiles in a fluidized bed, 183
Riser
inlet and outlet effects on flow patterns in gas–solid risers, 151
Rocking motion
mixing of granular material in a drum mixer undergoing rotational and rocking motions. II. Segregating particles, 125
Rope regions
the effect of a bend on the particle cross-section concentration and segregation in pneumatic conveying systems, 95
Rotating drum
mixing of granular material in a drum mixer undergoing rotational and rocking motions. I. Uniform particles, 113
Rotational motion
mixing of granular material in a drum mixer undergoing rotational and rocking motions. II. Segregating particles, 125

Segregation
segregation by size difference in gas fluidized beds, 139
Segregation patterns
mixing of granular material in a drum mixer undergoing rotational and rocking motions. II. Segregating particles, 125
Segregation problems
particle overlap and segregation problems in on-line coarse particle size measurement, 1
Serial model
a model for the prediction of the expansion of a fluidized bed of poly-sized resin, 258
Shape factor
effects of particle polydispersity and shape factor during dust cake loading on air filters, 241
Simulation
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166
particle aggregation and the van der Waals forces in gas–solids fluidization, 201
Stability
particle aggregation and the van der Waals forces in gas–solids fluidization, 201
Staining technique
a staining technique for evaluating the pore structure variations of microcrystalline cellulose powders, 135
Steady-state flow
a review of induced anisotropy and steady-state flow in powders, 191
Stereology
stereological correction of linear grade distributions for mineral liberation, 21
Strange attractors
the avalanching characterisation of the handleability of blended coal fuels, 157
Sulphide
physical and chemical changes of sulphides during intensive grinding in organic liquids, 74
Surface area
physical and chemical changes of sulphides during intensive grinding in organic liquids, 74
Surface modification
dry-pressing behavior of silicone-coated alumina powders, 104

Talc
correlation of powder characteristics of talc during Planetary Ball Milling with the impact energy of the balls simulated by the Particle Element Method, 166

Thermal resistance
microencapsulated phase-change materials as heat transfer media in gas-fluidized beds, 217
Thermal time constants
the influence of particle thermal time constants on convection coefficients in bubbling fluidized beds, 13
Thermodynamics
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79
Tumbling ball mill
effect of heat-assisted grinding of a calcium hydroxide–gibbsite mixture on formation of hydrated calcium aluminate and its hydration behavior, 279
Tumbling mixer
mixing of granular material in a drum mixer undergoing rotational and rocking motions. I. Uniform particles, 113
Turbine
a model for performance of the centrifugal countercurrent air classifier, 171
Two fluid model
computer simulation of bubbles in large-particle fluidized beds, 38
Two-phase particles
stereological correction of linear grade distributions for mineral liberation, 21

Vertical pipe
simulation of air permeation through a moving plug in a vertical pipe, 209
Voidage profiles
the application of computer-based imaging to the measurements of particle velocity and voidage profiles in a fluidized bed, 183

Wakes
dynamic forces on a horizontal tube due to passing bubbles in fluidized beds, 177
Water
effects of anticaking agents on the thermodynamics and kinetics of water sorption by potash fertilizers, 79

X-rays
the influence of horizontal internal baffles on the flow pattern in dense fluidized beds by X-ray investigation, 273

Zirconia–silica composites
the analysis of zirconia–silica composites using differential thermal analysis, Fourier transform-Raman spectroscopy and X-ray scattering/scanning electron microscopy, 109
